

Project Design Phase

Module 3 - Solution Architecture

Date :	27.09.2026
Team ID :	SWTID-2026-4107
Project Name :	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Solution Architecture

Solution architecture bridges the gap between the business problem and the technology solution. For this project, the architecture is designed to:

- Automate the standard laptop procurement process: Automatically process laptop requests from submission through approval and fulfillment.
- Provide a structured request process: Collect standard laptop requirements through a consistent ServiceNow request form.
- Automate approval and task management: Use Flow Designer to route approvals and create procurement tasks automatically.
- Improve visibility and tracking: Maintain request status and workflow activity throughout the procurement lifecycle.

Solution Architecture Diagram

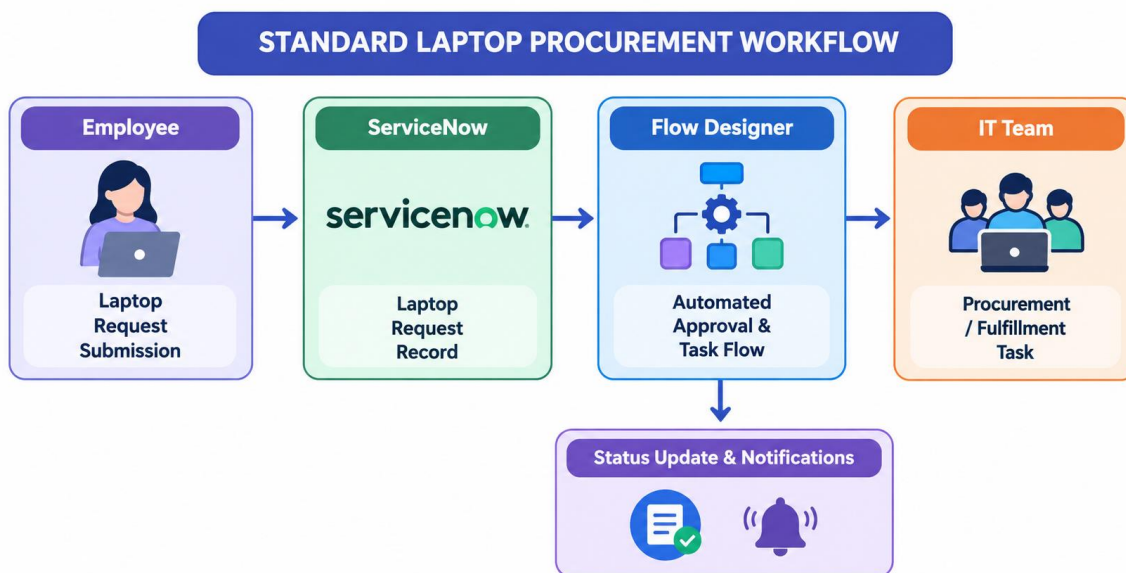

Figure 1: Architecture and workflow of the Standard Laptop Procurement Automation process

Process Workflow & Technical Specification

- 1. Request Submission:** Employee submits a standard laptop request through the ServiceNow request/catalog interface. Required employee and laptop information is captured.
- 2. Flow Trigger:** Flow Designer detects the newly submitted request. The predefined laptop procurement flow starts automatically.
- 3. Approval Processing:** Flow Designer sends the request to the appropriate approver. The workflow checks the approval result.
- 4. Procurement Task Creation:** If approved, Flow Designer automatically creates a procurement/fulfillment task. The task contains the required laptop request information.
- 5. Fulfillment & Status Update:** IT/procurement team processes the laptop order. The request status is updated as the order progresses.
- 6. Completion & Notification:** Once the laptop is fulfilled, the request is marked as completed. An automated notification is sent to the employee.
