

REQUIREMENT ANALYSIS

MODULE 3 – SOLUTION REQUIREMENTS

Date :	27.09.2026
Team ID :	SWTID-2026-4107
Project Name :	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Functional Requirements

FUNCTIONAL REQUIREMENTS		
FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Standard Laptop Catalog Request	• Provide a Standard Laptop Catalog Item in ServiceNow. • Allow the requester to submit a Standard Laptop request through the Service Catalog. • Create a Requested Item for the submitted request.
FR-2	Request Approval Processing	• Process the submitted Standard Laptop request through the approval stage. • Ensure the request is approved before the automated task-processing stage. • Use the approval status to control further processing.
FR-3	Flow Designer Automation	• Configure the “Standard Laptop Task” flow in Flow Designer. • Trigger the flow for the Standard Laptop request. • Process the approved request automatically.
FR-4	Catalog Task Creation & Assignment	• Automatically create a Catalog Task for the approved Standard Laptop request. • Set the required task description. • Assign the Catalog Task to the “Hardware” Assignment Group.
FR-5	Task Processing & Verification	• Allow the Hardware team to receive and process the Catalog Task. • Verify the Requested Item and task details. • Verify that the task is correctly assigned to the Hardware team.

Non-Functional Requirement

NON-FUNCTIONAL REQUIREMENTS		
NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Standard Laptop procurement process should be simple and easy to follow. The automated task creation and assignment should reduce unnecessary manual activities.
NFR-2	Reliability	The Flow Designer automation should execute consistently for approved Standard Laptop requests and create the required Catalog Task correctly.
NFR-3	Performance	The automation should process approved requests efficiently without unnecessary delays caused by manual task creation and assignment.
NFR-4	Maintainability	The Flow Designer flow should be easy to maintain and modify when changes are required in the Standard Laptop procurement process.
NFR-5	Consistency	The system should consistently create the Catalog Task with the required task details and assign it to the correct Hardware Assignment Group.
NFR-6	Scalability	The solution should be capable of handling multiple Standard Laptop requests using the same automated process without requiring manual task creation for each request.

Data Requirements

Field / Data	Purpose
Requested Item	Identifies the Standard Laptop request being processed.
Catalog Item	Identifies the requested item as Standard Laptop.
Approval Status	Determines whether the request has been approved for further processing.
Catalog Task	Stores the task generated for the approved request
Short Description	Provides the required task description, such as “Laptop need to be Configured”.
Assignment Group	Identifies the team responsible for the task — Hardware .
Task Status	Tracks the processing status of the Catalog Task.

Automation Requirements

The solution should use **Flow Designer** to automate the Standard Laptop procurement process.

The flow should:

1. Trigger for the Standard Laptop request.
2. Process the request after the required approval.
3. Create a Catalog Task automatically.
4. Set the required task details.
5. Assign the task to the **Hardware** Assignment Group.
6. Allow the Hardware team to process the task.
7. Support verification of the created task and assignment.

Maintenance Requirements

- The solution should be implemented using **ServiceNow Flow Designer**.
- The **Standard Laptop Task** flow should be easy to maintain and modify.
- The Standard Laptop Catalog Item should remain correctly associated with the configured flow.
- Task assignment should remain standardized to the **Hardware** Assignment Group.
- The solution should be extendable if additional laptop procurement requirements are introduced.

Expected Solution

The final solution should provide an **automated Standard Laptop procurement process** in ServiceNow.

The solution should:

- Reduce manual task creation.
- Automatically create the required Catalog Task after approval.
- Automatically assign the task to the **Hardware** team.
- Improve consistency in task processing.
- Help the Hardware team begin laptop configuration without unnecessary manual assignment.
- Provide a clear and verifiable procurement workflow.
